

SOMAPLAC A-C

SOMAPLAC A-C High Durability Building Plywood

TECHNICAL DESCRIPTION

Produced with a selected high quality pine veneers, this special panel is proper for concrete / shuttering end use once, SOMAPLAC A-C is manufactured in accordance with the US PS 1 – 09 product standard, and is subjected to quality control procedures.

CHARACTERISTICS OF MATERIALS | VENEERS

Raw materials from reforestation and sustainable management.

Pinus spp logs are pre-sorted and laminated as needed.

For the manufacturing of the plywood, sheets are classified according to their density, which impacts directly on their physical and mechanical resistance.

The greater density in the external part of the plywood panel gives it its strength and durability. The timber situated in the highest density region of the oldest log, where the growth rings are closer (MA= Mature Wood).

PHENOLIC RESIN FOR SHEETS COLLAGE

The SOMAPLAC A-C panel is glued with a waterproof resin, phenol-formaldehyde (WBP), especially designed for outdoor use or protected environments where the elements are subjected to humidity, drying or action of water.

The resin used for bonding meets STANDARDS:

EN 314-2 EN 636-3S EN 636 2S EN 636-1S

BS 6566 PART B: 1985 TIPO WBP

Classe 3 | Uso Exterior

All within the conventional classification **E1** in the emission of phenol. The application of the resin is homogeneous and weigh **360 gr/m²**, resulting in **55 kg** of resin per cubic meter of **SOMAPLAC A-C** produced.

Figure 1 - Region of Mature, Transition and Youth Wood

FEATURES AND BENEFITS

- Strong and rigid.
- Can withstand impacts and other forms of bruising.
- Easy to machine and install using conventional woodworking tools and fasteners.
- TECO® Certification. Can act simultaneously as load-bearing construction and stiffening element.
- Light and dimensionally stable.

Notes: 1Plywood continuous across two or more spans

These are total loads (weight of panel should be considered in horizontal applications)

Experience factor of 1.30 used in load tables.

The SOMAPLAC A-C panel is sealed with ink, to prevent / delay the absorption of moisture and ensure a tight seal decreasing the workability of the plywood panel. If they have to be cut during use, it is recommended that fresh edges be re-sealed to avoid localized swelling caused by rapid capillary penetration of moisture.
